PROJECT

NEXUS BETWEEN REAL AND FINANCIAL SECTOR OF SOUTH ASIAN COUNTRIES: AN EMPIRICAL EVIDENCE

The project investigates the relationship between the real and financial sectors using time series data from six South Asian countries (1987-2019) and 23 Indian states during the post-reform period. By visually analyzing various indicators and econometric tools that have been employed to establish the interdependencies between the sectors. The project involved visual analysis of key economic indicators and provided empirical evidence of the interaction between financial development and real sector growth.
