Powerpoint  SQL  Power Bi 

PERSONAL PROJECTS

Protection of load and Charge in Solar Power Management

- In this proposed system a Solar panel is used to charge a battery. As a comparator, operational amplifiers are used to monitor the voltage, current of the panels continuously. The LEDs are used to specify the condition of battery when battery is fully charged green LED will blinks as well in uncharged condition red LED blinks. furthermore, this project can be developed by using GSM modem and a microcontroller. By using these the status of system can be communicated to the control room through SMS.
