PROJECTS

Valuation Techniques for High-Growth Startups

6 Months

- Conducted valuation analysis for early-stage startups using Discounted Cash Flow (DCF), Venture Capital (VC) Method, First Chicago Method, and Real Options Analysis.
- Analyzed financial forecasting challenges arising from volatile cash flows, limited historical data, and high uncertainty in early-stage ventures.
- Performed comparative valuation analysis through case studies of Uber, Tesla, WeWork, OpenAI, and Instagram. Executed scenario analysis and Monte Carlo simulations to assess valuation risk, sensitivity, and outcome variability.
- Evaluated the financial impact of intangible assets, including intellectual property (IP), scalability, business model strength, and founder experience.
- Developed a risk-adjusted valuation framework to enhance the reliability and accuracy of investment and financial decision making.
