## Skills

- **HTML**
- **CSS**
- **JavaScript**
- **JQuery**
- **Ajax**
- **Bootstrap**
- **Codeigniter**
- **Laravel**
- **Wordpress**
- **Mysql**
- **Monogo DB**
- **GIT Commands**
- **Agile methodolies**
- **CI/CD pipeline**
- **Linux Commands**
- **RESTful API**
- **React js**
- **Redux**
- **CakePhp**
- **Node.js**
- **Express.js**
- **Tailwind css**
- **Alpine.js**

## SUMMARY

- I'm a Software developer of 5 years of experience with proven efficiency and an ability to quick learn and navigate any program.
- Expertise in PHP backend programming in building and managing web applications.
- Im specialize in developing dynamic, scalable and secure web applications.
- Good Knowledge in User Interface, testing, debugging processes.
- Proficient in various platforms and languages.
- Highly productive and organized to provide the best service to clients as possible.

## WORKEXPERIENCE

**I-OPEX Technologies, Chennai,IN**

**2024-02 - 2024-07**

### Consultant

- In this company I have worked on **Codeigniter,React.js** Framework websites
- I have worked on company product development, including building Attendance and Salary Management Systems, implementing role-based access control, automated payroll processing, and real-time attendance tracking.
- I have extensive experience in developing and integrating **Restful APIs** for frontend teams enabling communications between backend and React.js applications.
- I have hands-on experience with **Linux OS**, managing servers using **sudo commands**, and installing/configuring essential software packages, configuring servers, and troubleshooting system-level issues.

**TARGETBAY E-commerce solutions PVT LTD, Chennai, IN**

**2023-06-2023-12**

### Senior Software Programmer

- In this company I have worked on **Laravel ,Reactjs** Framework websites
- I have worked extensively on ecommerce platforms, developing and selling plugins that help businesses collect customer reviews via email.
- I have implemented **Laravel Queues and Jobs** to handle bulk email sending efficiently, ensuring smooth and asynchronous email delivery without affecting application performance.
- Utilized **MVC framework** to enhance scalability and maintainability of codebase.
- I have extensive experience working in **agile methologies** to ensure efficient project execution I have collaborated with cross functional teams..
- **Create React App (CRA)** – Classic starter kit for bootstrapping a React project with zero config.
- **JSX** – JavaScript syntax extension that lets you write HTML-like code in JS.
- **Components** – Reusable, independent UI blocks (functional and class components).
- **Props** – Mechanism for passing data from parent to child components.
- **State** – Used to manage dynamic data within a component.
- **React Developer Tools** – Browser extension (Chrome/Firefox) for inspecting component hierarchy, props, state.
- **React Hooks** – useState, useEffect, useContext, useRef, etc., for managing component logic in functional components.
- **Fetch / Axios** – For REST API calls using Laravel.
- **React Router** – Standard for client-side routing (nested routes, parameters, etc.).
- **CSS Modules / Styled-Components / Emotion** – Different approaches to styling.

- In this company I worked with **Codeigniter** and **Laravel** Frameworks. handling full-cycle development from requirement analysis to deployment.
- I have developed and integrated third-party games into websites by fetching game data from external providers using **cURL** for API communication.
- This allows seamless integration of multiple games into our platform while ensuring real-time data synchronization and smooth game play experiences.
- I have also worked on selling these game-integrated websites to customers, ensuring they are fully functional, secure, and optimized for performance.
- I have extensive experience in integrating payment gateways such as **Astropay, Stripe, Paypal, Razorpay, Qpay, MPSA, Qaicash, Cryptopay, Ecobank, Worldline** payment gateways etc.
- And moreover ensuring secure transactions through token handling system, encrypting and decrypting sensitive data. With techniques like **JWT, OAuth, sha256, Base 64 encode and decode**.
- Worked with frontend teams and getting the designs given in the figma using HTML and CSS for smooth user experience.
- I have worked SMS gateway integrations such as **twilio**. And email authentication services like **SMTP, Send grid** to enhance application communication and security.
- I have also implemented authentication system using **Google and Facebook** OAuth for enhancing user experience and and secure login mechanism.
- I have also implemented push notification using **Fire base** cloud Messaging (FCM) to improve user engagement And worked on web based app download on chrome.
- I implement **CSRF** token authentication to prevent security vulnerabilities and ensure safe data transactions.
- I have worked on windows OS. And in terms of deployment I have used **WinScp** (secure file transfer and remote server management) and **Jenkins** (Automating deployment pipeline for continuous integration CI/CD and Ensuring smooth error free deployments)
- I have worked with database teams to design efficient data structures, optimize queries and implement stored procedures for faster and more efficient data. Im expertise in **MYSQL** and good knowledge in MongoDB.
- I have worked on maintenance task using **Cron jobs** and Time scheduling. And I have **unfuddle** for task tracking
- I have handled end-to-end project development from gathering requirements from client to understand their business needs and helping them out of their technical solutions to maintain high quality applications and successful project delivery on time.
- My role involves gathering and analyzing client's requirements, defining project roadmaps finalizing the task with team lead given by the client and assigning the task to the team members ensuring timely completion while maintaining high quality standards and secure web applications.

**Web developer**

- In this company I have worked **corePHP** and **Wordpress** theme customization.
- I have developed developing diverse web applications like matrimony sites, job portals, event management platforms, and tour package sites
- The companies specialize in developing and selling various websites to clients for business needs. They create customized web solutions ensuring each websites fully functional, user friendly and optimized for performance. By understanding client requirements they deliver high quality websites.
- During this time, I gained a strong foundation in coding and web application development, while enhancing my skills in customizing wordpress themes and build a diverse corephp websites to meet specific project and client requirements.

**Conclusion**

- I enjoy problem solving, whether the developing new feature, debugging issues, improves code efficiency and improve code efficiency, system performance and mentoring junior developers.
- I write neat, clean, maintainable and reusable code. And also review the code of others.
- I'm excited about new challenges and opportunities where I contribute myself for company's growth.
