## Junior Project Manager | Enterprise Software Implementation | Digital Transformation Lead

---

Results-driven Junior Project Manager experienced in delivering large-scale IT implementation projects across 30+ colleges and 1,00,000+ active end users. Expertise in requirement analysis, sprint planning, stakeholder coordination, vendor management, and change management. Successfully led digital transformation initiatives, digitizing high-volume procurement and operational workflows. Brings a technical foundation in backend development to effectively bridge business and engineering teams.

### Core Competencies / Key Skills

---

- Software Implementation & Digital Transformation
- IT Project Management & Software Delivery
- Requirement Gathering & SRS Documentation
- Software Development Lifecycle (SDLC)
- Sprint Planning & Agile Coordination
- Stakeholder & Vendor Management
- Risk Identification & Issue Resolution
- Digital Transformation & Process Optimization
- User Training & Change Management
- Cross-Functional Team Leadership
- Data Management & Master Data Structuring (Excel, SQL)
- Technical Understanding: Java, REST APIs, System Integratio

### Education

---

**Parul University**, B.Tech Computer Science Engineering July 2019 – April 2023

- CGPA: 7.03
- **Coursework:** Computer Architecture, Data Structure and Algorithm, Cloud Computing, Operating System, Computer Networks, Database and Management System

### Experience

---

**Digital Inventory Analyst**, Parul University – Vadodara Sept 2023 – Present

- Drove digital transformation by leading the end-to-end implementation of the Computerized Maintenance Management System (CMMS) and e-Procurement platform, streamlining procurement, maintenance, and asset operations university-wide.
- Led end-to-end enterprise software implementation impacting 30+ institutes and 1,00,000+ active users, enabling centralized ticketing and issue resolution workflows.
- Designed and deployed a digital ticketing ecosystem allowing 1,00,000+ end users to raise and track service requests, improving transparency and response efficiency.
- Implemented and scaled an e-Procurement platform onboarding 5,000+ vendors, streamlining vendor communication and procurement lifecycle management.
- Structured and migrated 45,000+ material records (15,000+ per purchase office across 3 offices) into a centralized digital master database, improving procurement accuracy and reporting.
- Spearheaded digital transformation initiatives eliminating paper-based workflows and improving operational efficiency across procurement and maintenance departments.
- Coordinated with cross-functional stakeholders including finance (CAs), estate department, and technical teams to resolve operational blockers and ensure smooth system adoption.

**Trainee Software Engineer**, Zyapaar (Let's Talk Business Pvt Ltd) – Ahmedabad

Nov 2022 – April 2023

- Contributed to backend development using Java Spring Boot, assisting in building and optimizing RESTful APIs for B2B enterprise applications.
- Designed and implemented database interaction layers to handle data storage, retrieval, and validation for core business modules.
- Performed API integration and testing using Postman to ensure seamless communication between frontend and backend services.
- Collaborated with the frontend and QA teams to identify and fix integration issues, improving system performance and reliability.
- Participated in code reviews, version control (Git), and Agile sprints to maintain clean, maintainable, and well-documented codebases.
- Gained hands-on experience in modular API design, request/response handling, and improving backend logic for real-world use cases.

## Projects

---

### University-wide CMMS Implementation

- Deployed a CMMS across 36 Colleges, 30 Hostels, and 3 Hospitals to digitalize asset tracking and maintenance operations.

### E-Procurement System Implementation

- Implemented e-Procurement software, digitized 15,000+ material items and 5,000+ vendors, and trained 5,000+ suppliers for smooth onboarding.

### In-House CMMS/Procurement Development (Ongoing)

- Leading internal product development to replace third-party systems, reduce AMC costs, and enhance customization.

## Technical Skills

---

**Backend Development:** Java, Spring Boot, RESTful APIs

**API Testing & Tools:** Postman, Git, Swagger

**Database Management:** MySQL, SQL (data operations, data cleanup)

**Implementation & Data Management:** Microsoft Excel (advanced), Google Sheets, Data Validation, Master Data Structuring

**Project & Collaboration Tools:** Jira, MS Teams, Slack, Email Documentation.

**Other Skills:** Software Implementation, Vendor Coordination, System Integration, Requirement Analysis, User Training
